Activity - 1 (Decode the chart)

Chart - ①:- Regional Comparison.

* It compares the attendance Percentage in four cities.

* Surat has the highest attendance, while Vizag has the lowest attendance.

* Yes, I mostly trust it because the values are clearly shown and easy to compare.

Chart - ②:- Expense Breakdown by category.

* It Shows how the total expenses are divided among different categories.

* Some categories take a larger share of the expenses than other.

* I Can understand the overall distribution, but I cannot fully trust it without knowing the exact values and source of data.

Chart - ③:- Video Game Sales vs. Youth Crime rate.

* The chart shows that video Games sales and Youth Crime rate increase over the Given time Period.

* Both lines appear to move upward together.

* I would be Careful About the Content of the Source of data is about Video Games.

Chart - ④:- Advertising Spend (Rs) vs. Sales revenue (Rs).

* It shows the relationship b/w advertising and sales revenue.

* The Points are widely Scattered, so there is no very clear relationship b/w them.

* I would Partly trust it because many data Points are
